

MIRUS TECHNOLOGY

www.miruscorp.com

Mirus Technology is an SBA minority veteran-owned company specializing in providing satellite-based technologies and service solutions to the Federal, state and local sectors, as well as the commercial arena. Mirus personnel continue to support these evolving capabilities, which have significant added potential for operational applications throughout military, medical, law enforcement, firefighting and other communities, as well as a vast array of civilian and commercial spheres. These applications encompass, in part, Search and Rescue, Blue Force Tracking, Automatic Dependent Surveillance (ADS), and Global Navigation Satellite Systems (GNSS) and associated augmentation systems. Mirus offers a multi-faceted range of services to our clients including: Architecture and Concept Definition, Project Management, Network Engineering, Systems Integration, Hardware and Software and Operational Implementation.

Mirus Technology offers superior IT field services and managed service support, enhancing the service, productivity and profitability of your organization. We will identify requirements and develop a custom and comprehensive solution comprised of a menu of services that includes network connectivity, security, LAN/WAN administration, software/hardware installation, and web development to meet those needs, always bearing in mind the critical importance of effectiveness and efficiency.

The emergence and preeminence of satellite-based technologies over the last decade make them an essential and inevitable tool for everyday life. An organization's ability to communicate, locate, and manage assets in real-time is vital to efficient and safe operations. Government and commercial users increasingly require products and services embodied within seamless, integrated capabilities. Mirus Technology tailors and implements full-service, start-to-finish solutions delivering mission-sensitive data to support daily operations. Mirus excels in developing and deploying these mission-critical programs and products into the hands of operational users. These capabilities include:

- Architecture and Concept Definition
- Project Management
- Network Engineering
- Systems Integration - Hardware and Software (IT/IS/IA)
- Operational Implementation

Contact Mirus Technology to learn more about how we may support your efforts.

“Wonderful, astonishing, extraordinary” - in Latin, these key descriptives represent the definition of Mirus. It is our corporate commitment to provide each and every customer with extraordinary solutions and exceptional results.
